

Terminology

Support Status “Active”: meaning that SW updates are made available periodically including Google security patch updates and bug fixing.

Support Status “Active – variable frequency”: meaning that SW updates are made available, but the frequency of the updates is not guaranteed anymore due to lack of support from Datalogic partners for such OS versions. Datalogic will solely assess each security vulnerability reported in the ASB (Android Security Bulletin) and determine if it is possible to backport.

Support Status “Transition”: meaning that a more recent OS version has been released, SW updates for the previously existing version are made available, but it is recommended to update to the latest OS version to continue to get updates in future.

Support Status “Transition – variable frequency”: meaning that SW updates are made available, a more recent OS version has been released, and it is recommended to update to the latest OS version to continue to get updates. In addition, the frequency of the updates is not guaranteed anymore due to lack of support from Datalogic partners for such OS versions. Datalogic will solely assess each security vulnerability reported in the ASB (Android Security Bulletin) and determine if it is possible to backport.

Support Status “Expired”: meaning that SW updates have been released and are still available for download, however no further releases will be made available.
